IMY 761 Final Presentation

Overview

As part of the final deliverable, you will be required to present your research project to the class in a format similar to an academic conference presentation. The presentation must include all the main sections of your final paper as listed below and must work as a single coherent presentation. You must also be prepared to respond to feedback and defend the choices you made.

Practical instructions
The presentation will be done in class on whichever software you prefer. We will have a laptop you can use or you will be able to use your own (as long as it has an HDMI connection).

The presentation must be around 15 minutes long plus 5 minutes for questions.

Presentation details

An academic presentation provides a brief summary of a research project and gives room for attendees to ask questions about it. The main points covered in such a presentation typically include:

- Introduction to the problem
- Research questions
- Quick background to the study (primarily to contextualise why the research was done)
- Methodology
- Overview and discussion of the results
- Limitations and directions for future research

Furthermore, for your presentation you should also reflect on what you learned during the process of conducting your research.

Finally, you should also be prepared to answer questions from your lecturers and classmates about your research and be ready to defend the choices you made. Feedback/critique from fellow researchers is a key part of an academic presentation, so it is crucial that you are able to motivate the overall trajectory of your research. In some cases, the choices might have been based on salient issues in the literature, for logistical reasons, and/or simply because they pertained to the specific problems you were interested in exploring. Whichever applies, it is important that you are able to logically and transparently motivate each step in the total process of how your own research project unfolded.

You will be assessed based on your ability to give a coherent and engaging presentation, how well you demonstrate an understanding of your problem/chosen methods/etc., and how well you respond to feedback/critique.

Presentation

Criteria	Poor	Average	Good	Excellent
Coherence: Presentation flows smoothly and logically between different main sections	1	2	3	
Engagement: Presentation is well thought-out and stays engaging throughout	1, 2	3	4	5
Comprehension Presentation demonstrates a keen understanding of why key decisions were made throughout the process	1	2	3	
Feedback Presenters are able to provide satisfying answers to questions from attendees	1, 2	3	4	5
Total	/16
