IMY 761: Explainer video for your software

Create a short **explainer video (maximum 3 minutes)** that clearly showcases the software or system you developed for this research project. The video should function as a **standalone presentation**, meaning it must make sense without additional explanation.

Your video should:

- **Demonstrate the software in action**, highlighting its main features and functionality.
- **Explain how the design addresses the research problem and questions** identified in your paper.
- Include **voice-over narration** to guide the viewer through the purpose, context, and key design decisions.
- Use **clear visuals** (e.g., screen recordings, animations, or annotated mockups) to illustrate how the system works and what users can do with it.

Keep it concise, focused, and professional.
